

Roasted Stud Cattle Mix

Metabolisable Energy	12.0mj/kg
Min. Protein	12.5%
Min. Crude Fat	3.0%
Max. Crude Fibre	8.0%
Calcium	1.5%
Phosphorus	0.8%
Salt	0.5%
Copper	15.0mg/kg
Selenium	0.1mg/kg

Roasted Stud Cattle Mix is a high energy ration made specifically to provide optimum growth and development in stud cattle. The grains have been micronised and flaked to gelatinise the starch, allowing maximum digestibility and energy utilisation. Other features is the use of whole cottonseed, a product

very high in digestible fibre, good quality protein and oil, all of which are essential for maximum growth. The protein level has been boosted to meet the requirements of the stud animals to provide maximum muscling and confirmation. We have also ensured that the correct levels of vitamins and minerals are available for the optimal development of the frame of the animal. Vegetable oil has also been added to not only allow maximum growth, but to assist in providing a nice glossy healthy coat

Feeding Rate

The introduction of feed over 2 weeks is probably the most important part of successfully feeding cattle. Start cattle on a small amount at first increasing to a maximum of 1.5% of the animal's body weight over a period of 10 to 14 days. E.g. 400kg animal feed 4 to 6kg. Cattle should have access to fresh clean water at all times. If hand feeding, cattle should be fed at least 2 times per day. If hay or chaff is fed be sure it is not mouldy.

Ingredients

Micronised Sorghum and Barley, Protein Meal, Vegetable Oil, Molasses, Dicalcium Phosphate, Limestone, Sodium Bentonite, Whole Cotton Seed, Salt, Urea, Stud Cattle Premix, Bovatec.
