

Roasted Dairy Flakes

Metabolisable Energy	12.5mj/kg
Min. Crude Protein	14.0%
Min. Crude Fat	4.0%
Max. Crude Fibre	8.0%
Calcium	1.5%
Phosphorus	0.8%
Salt	1.0%

Roasted Dairy Flakes is a high energy dairy supplement available with differing protein contents to meet changing pasture conditions throughout the year. The use of slower rumen digestible protein sources such as protein meals provide sustained nutrient release to rumen micro organisms throughout

the day to promote fibre digestion. The rumen modifier, Bovatec, can be included in the feed in order to improve milk production without loss of milk solids. Biotin is included in the feed to reduce the incidence of hoof disorders and prevent lameness during periods of prolonged wet conditions. The roasted grains together with high levels of molasses ensure that the feed is highly palatable.

Feeding Rate

The amount of Roasted Dairy Flakes to feed is usually based on the body weight of the animals to be fed, the stage at lactation, and the quality and amount of pasture available. It is recommended that at least 2-3kg be fed daily, with high producing cows receiving 8kg. As a general rule, 1kg of feed should be fed for every 3 litres of milk produced. The animals must be provided with fresh water at all times, with watering troughs being cleaned out at least every 2 days. Feed should be kept as fresh as possible, and stored in a dry, shady area. It is recommended that this product be used within 6 weeks of purchase.

Ingredients

Micronised Sorghum, Barley and Maize, Protein Meal, Dairy Premix, Sodium Bentonite and Salt Lime.
