

Micronised Barley Flakes

Metabolisable Energy (Horses)	13.2mj/kg
Metabolisable Energy (Ruminants)	15.5mj/kg
Protein	10.9%
Fibre	7.0%
Salt	0.5%

Micronised Barley Flakes is a popular feed consisting of natural barley that has been steam treated, micronised, flaked and blended with pure cane molasses. This special processing provides optimum gelatinisation of the starch and allows full digestibility for all animals. The product is very palatable and can be used as either a base feed or as a conditioning additive to an existing feed

Benefits of feeding Micronised feed are:

- *Animal is able to extract more energy from the feed*
- *Highly digestible and palatable*
- *Extended storage life*
- *Safer, less problems with founder and acidosis*
- *Improved by-pass protein*

The inherent benefits achieved through micronisation allow the product to be fed at reduced levels, therefore making it cost effective to use.

Feeding Tips

- 1. Fresh water should be available at all times.*
- 2. Introduce any feed changes slowly over 3 or 4 days.*
- 3. Roasted Barley Flakes is not a complete ration and a vitamin and mineral supplement may be necessary.*
- 4. In the case of horses and ruminants, feeding a fibre source such as pasture grasses, lucerne hay or chaff or oaten chaff is essential.*
