

Micronised Maize Flakes

Metabolisable Energy (Horses)	16.0mj/kg
Metabolisable Energy (Ruminants)	14.6mj/kg
Protein	8.6%
Fibre	2.5%
Fat	3.4%

Maize has always been recognised as a valuable energy source for stock. In its raw state it provides twice as much digestible energy as the same volume of oats. Mi-Feed, with its developed expertise in feed manufacturing, has been able to create a roasted (micronised) flaked maize product which has further enhanced the benefits of maize as an energy source in stockfeeds.

Benefits of feeding Micronised feed are:

- Animal is able to extract more energy from the feed
- Highly digestible and palatable
- Extended storage life
- Safer, less problems with founder and acidosis
- Improved by-pass protein

The inherent benefits achieved through micronisation allow the product to be fed at reduced levels, therefore making it cost effective to use.

Feeding Tips

1. Introduce any feed changes slowly over 3 or 4 days.
2. Roasted Maize Flakes is not a complete ration and a vitamin and mineral supplement may be necessary.
3. In case of horses and ruminants, feeding a fibre source such as pasture grasses, lucerne hay or chaff or oaten chaff is essential.
4. Fresh water should be available at all times.
