

# Micronised Wheat Flakes

Metabolisable Energy (Ruminants)	15.6mj/kg
Protein	12.8%
Fibre	2.7%
Salt	1.2%

## *Micronised Wheat Flakes*

*consists of natural wheat that has been steam treated, micronised and then flaked. This special processing provides optimum gelatinisation of the starch and allows full digestibility for the animals. Wheat is a very palatable product and can be used as either a base feed or as an additive to existing feeds.*

## **Benefits of feeding Micronised feed are:**

- *Animal is able to extract more energy from the feed*
- *Highly digestible and palatable*
- *Extended storage life*
- *Safer, less problems with founder and acidosis*
- *Improved by-pass protein*

*The inherent benefits achieved through micronisation allow the product to be fed at reduced levels, therefore making it cost effective to use.*

## **Feeding Tips**

- 1. Introduce any feed changes slowly over 3 or 4 days.*
- 2. Roasted Wheat Flakes is not a complete ration and a vitamin and mineral supplement may be necessary.*
- 3. In case of horses and ruminants, feeding a fibre source such as pasture grasses, lucerne hay or chaff or oaten chaff is essential.*
- 4. Wheat should not make up more than 50 percent of the grain mix (maximum of 33% is common) nor be fed at a rate greater than 5.5kg per cow per day.*
- 5. Fresh water should be available at all times.*
