

Supa Coarse Laying Mash

Crude Protein	15%
Crude Fibre	3.0%
Crude Fat	2.5%
Calcium	5.0%

Supa Course Laying Mash has been designed to feed to domestic and free range laying hens. Whole grains are included to allow hens to behave naturally by picking and scratching. A protein pellet has been included to keep fine particles at a minimum. This allows the hen to eat all the feed and not leave any in the feeder. Maize is added to assist in producing nice bright golden yolks and limestone grit is included to help in the formation of the egg shell.

Feeding Rate

Supa Course Laying Mash must only be fed to hens that are laying. This normally occurs between 18-22 weeks of age. Feed consumption will increase from 100g/day early in the lay to 130g/day at the end of lay. Chick Starter Crumbles and Pullet Developer Crumbles are fed before point of lay. Towards the end of the lay shell quality may deteriorate, and supplementation with limestone grit or shell grit may be necessary. Green feeds and scraps are a source of vitamins and can enhance yolk colour. Feeding too much poor quality scraps in place of balanced rations can effect egg production and animal health. Ensure your poultry has access to fresh, clean water.

Ingredients

Sorghum, Wheat, Maize, Protein Pellet, Molasses, Vitamin and Mineral Premix, Limestone Grit, Sodium Bentonite, Vegetable Oil and Methionine.
